

# COEN 241 – HW2

## Screenshots

Abhay Tamilselvan (W1606871)

1. The “1. Invoking figlet function” folder contains two screenshots displaying the invoked figlet function in the CLI and the UI.
2. The “2. sudo journalctl command” folder contains a screenshot after using the command `sudo journalctl -u faasd --lines 40`.
3. The “3. OpenFaas Gateway after deployment” folder contains two screenshots.
  - a. The first screenshot shows the image in the OpenFaas Gateway UI after deploying figlet, slack-request and slack-interactive functions.
  - b. The second screenshot shows the above deployed functions by using the command `faas-cli list`.
4. The “4. Invoking slack-request and slack-interactive” folder contains a screenshot of slack-request and slack-interactive being invoked.
5. The “5. My Slack API” folder contains the screenshots of the slack-request and slack-interactive functions running on the Slack application.

When the slash command `/cloudrequest` is used on the slack channel, the slack-request function is called. It has two buttons on it. When any one of the buttons is pressed, the slack-interactive function is called.

Link to the application: <https://api.slack.com/apps/A02LTA292H1>
